

citrus board

a rp2350 based board!

usb-c!
(unlike the pico)

a hstx connector
(can be used for hdmi and dvi)

lipo support!

lipo connector
AND charger!!

running on the RP2354A (18 MB
of flash total!)

standard rpi debugging connector
(works with the debug probe)

a custom RP2350-based board, using the
RP2354 specifically, alongside other QOL
features, including a debug connector, a
whopping **18 MB** of flash storage (2 MB on board
+ external chip).

also has a HSTX port, a RP2350 specific feature
that allows you to run complex signals (like usb)
without a significant effect on the rp2350's
processing speed
