

citrus board

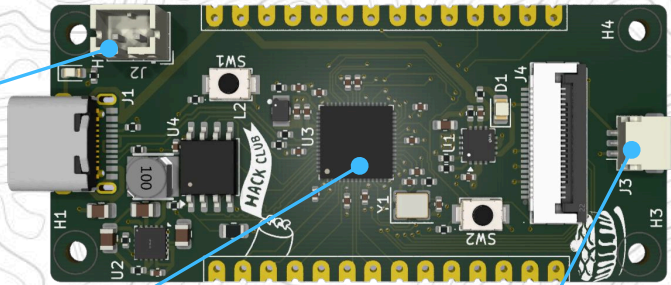

a rp2350 based board!

usb-c!
(unlike the pico)

a hstx connector
(can be used for hdmi and dvi)

lipo support!

standard 2pin JST PH

lipo connector
AND charger!!

running on the RP2354A (18 MB
of flash total!)

standard rpi debugging connector
(works with the debug probe)

github!!

a custom RP2350-based board, using the
RP2354 specifically, alongside other QOL
features, including a debug connector, a
whopping 18 MB of flash storage (2 MB onboard
+ external chip).

also has a HSTX port, a RP2350 specific
feature that allows you to run complex signals (like
hdmi) without a significant effect on the
rp2350's processing speed
